Dataset

From Kaggle, scraped from Bikez.com

~ 38'000 rows, 77 columns

Dataset

Analysis

End

How is our dataset structured?

Each row, is a different bike model:

Model	Manufacturer	Year	HP	Displacement_cc	Engine type	Top_speed_kmh
BMW F 750 GS	BMW	2021.0	77.0	853.0	Twin, four-stroke	190.0

The set contains the price, but not any indications on sales for that model

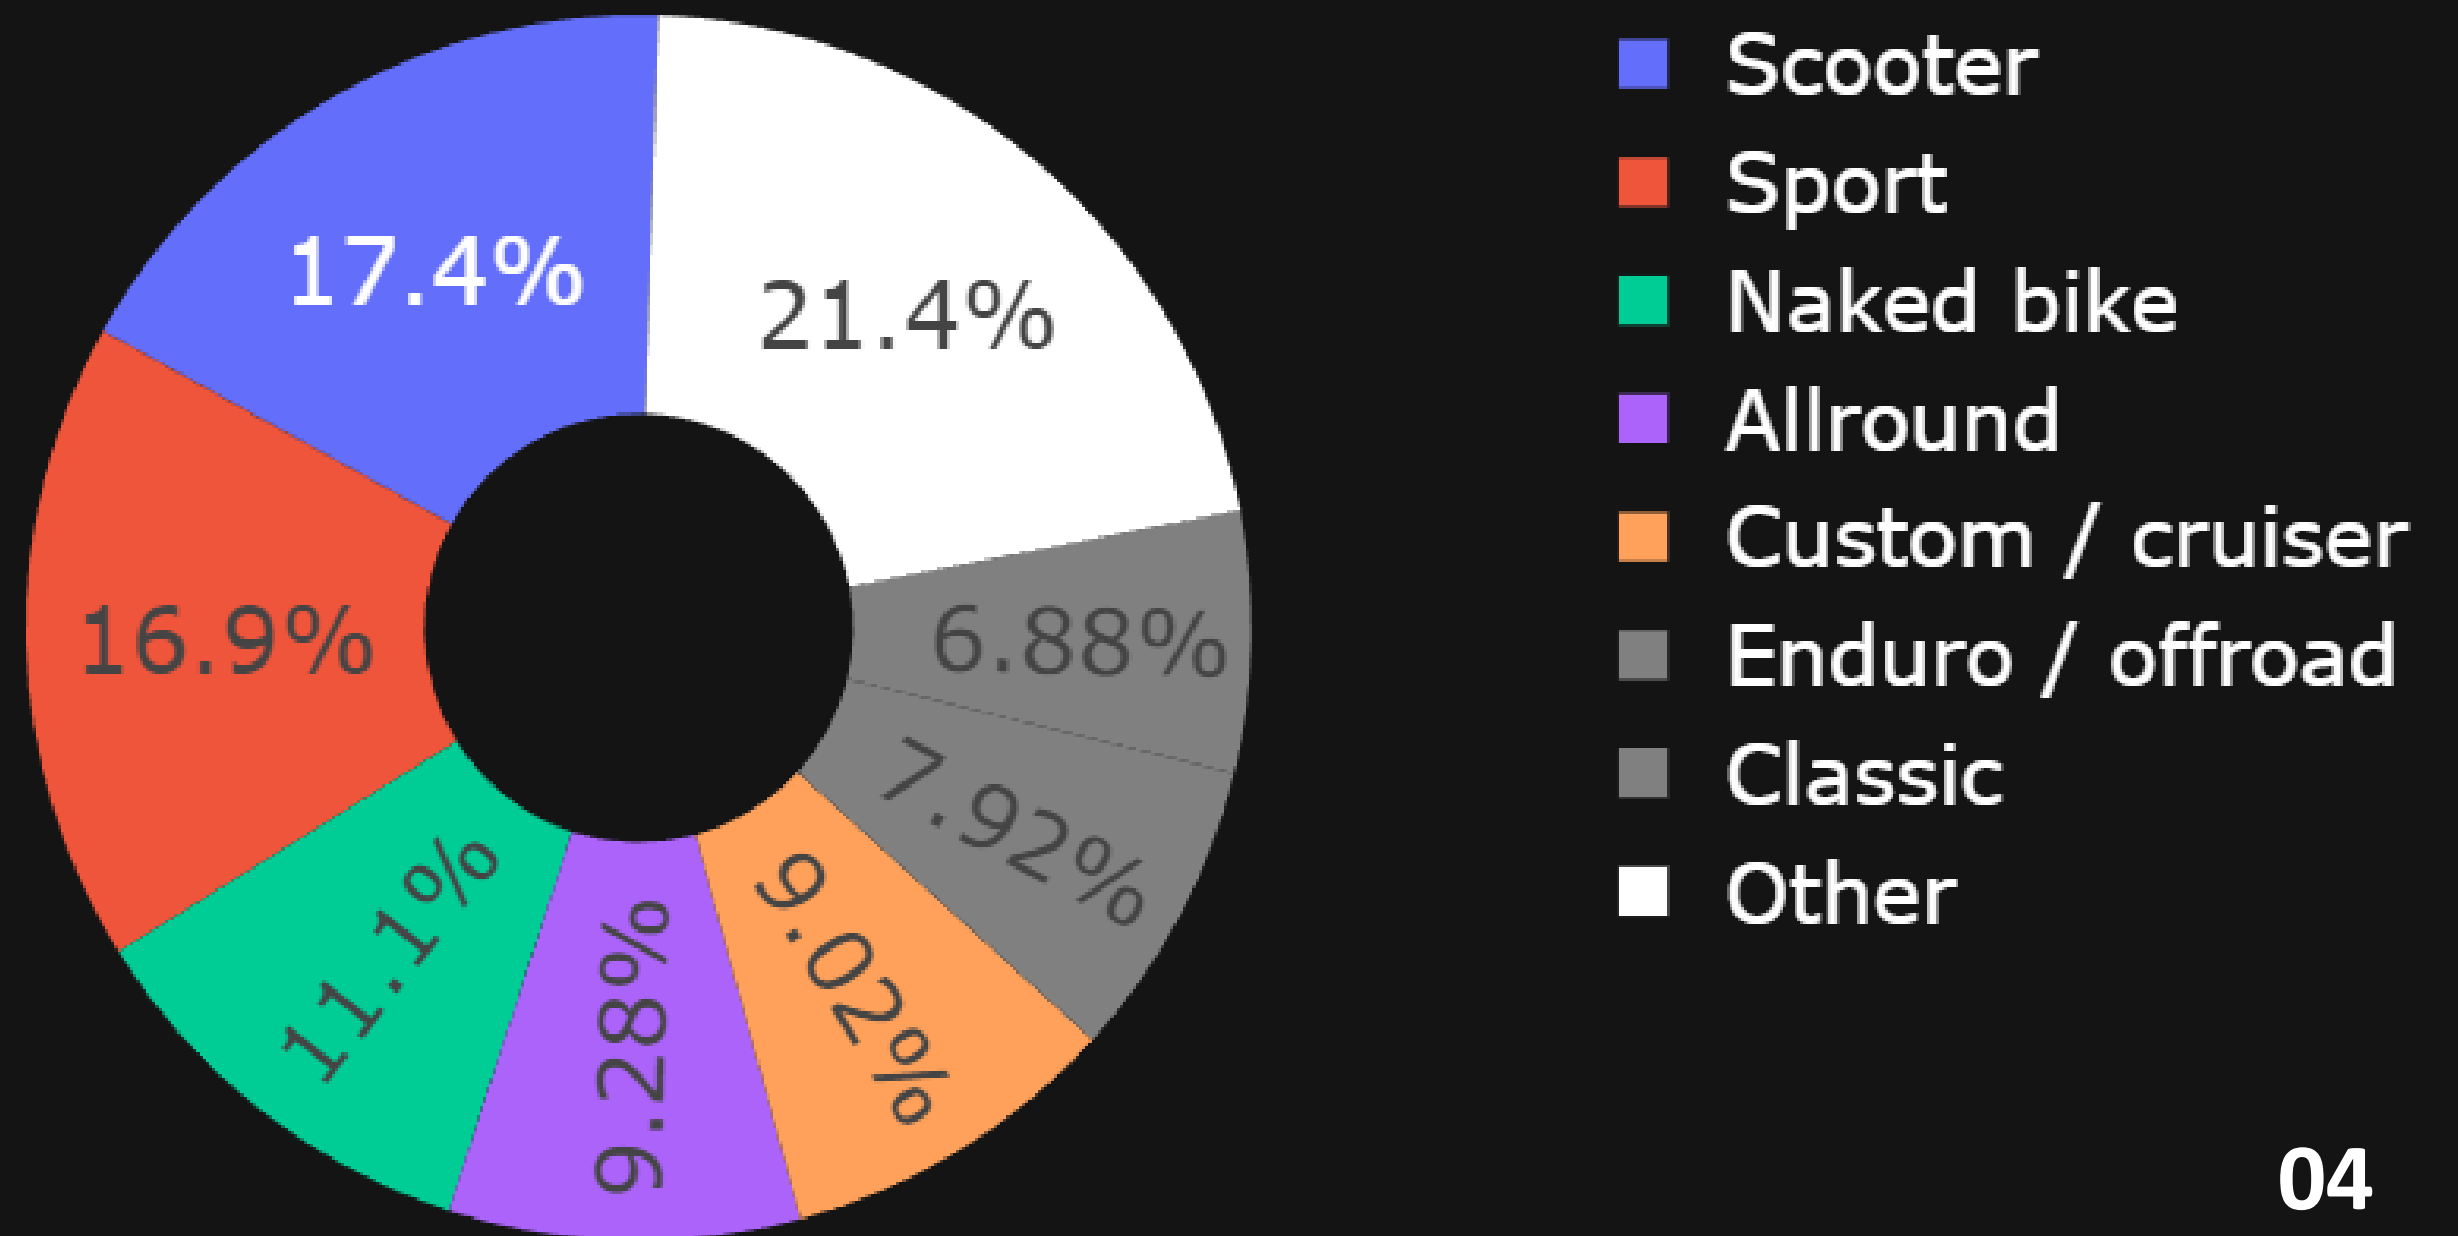

Dataset

Models by type of bike

Dataset

Analysis

End

Number of scooters launched exploded

Good compromise for the life in the city

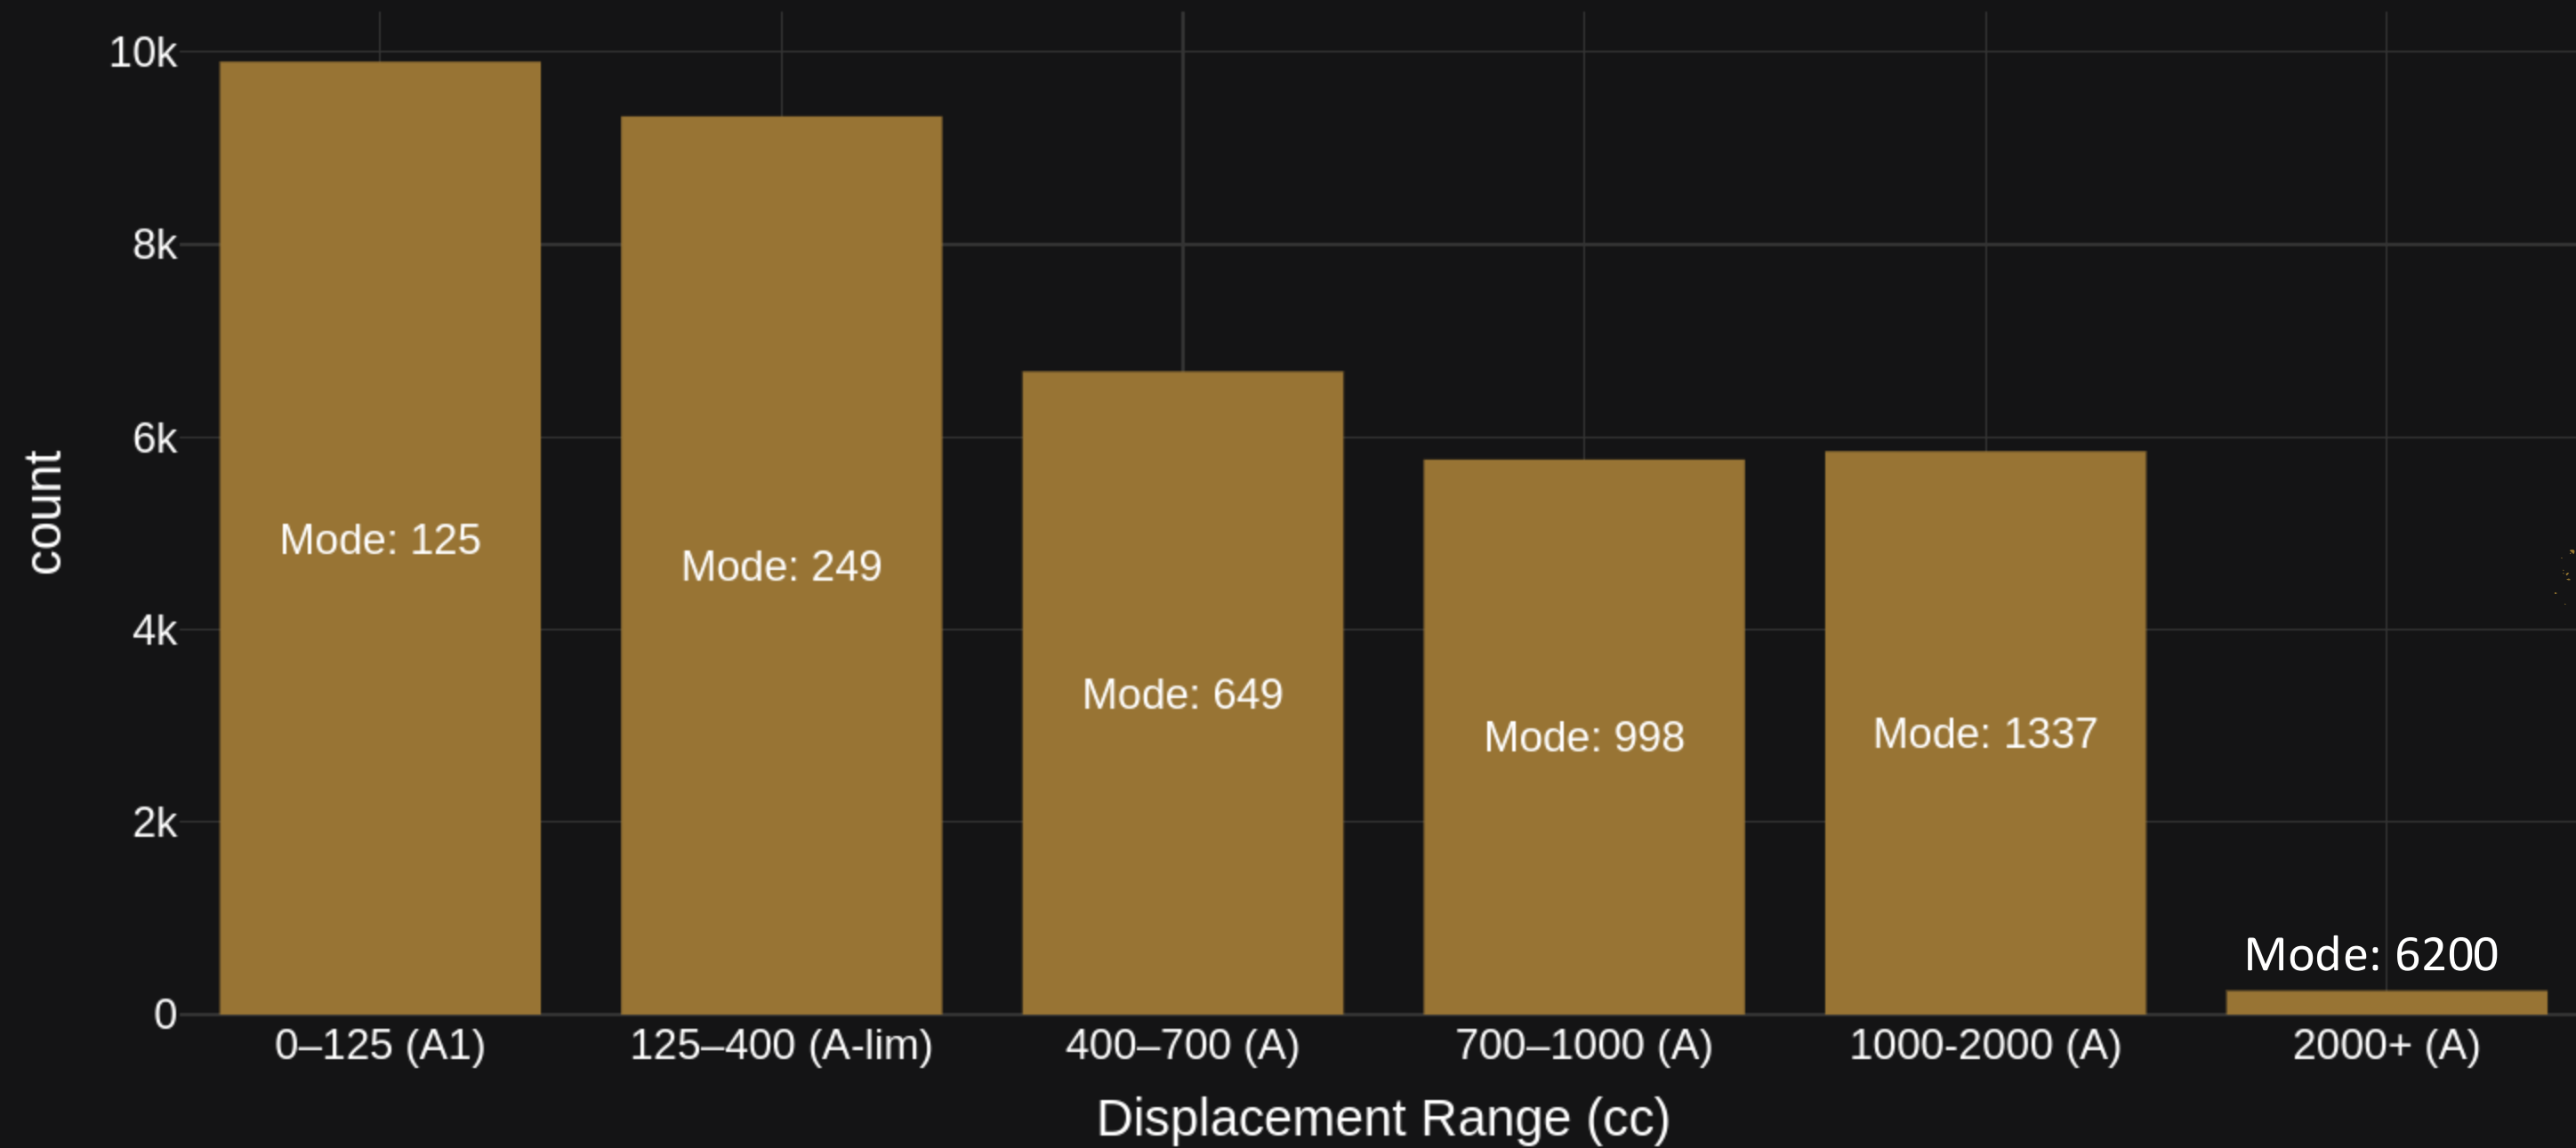

Dataset

Analysis

End

The mode likely shows different bikes with the same engine

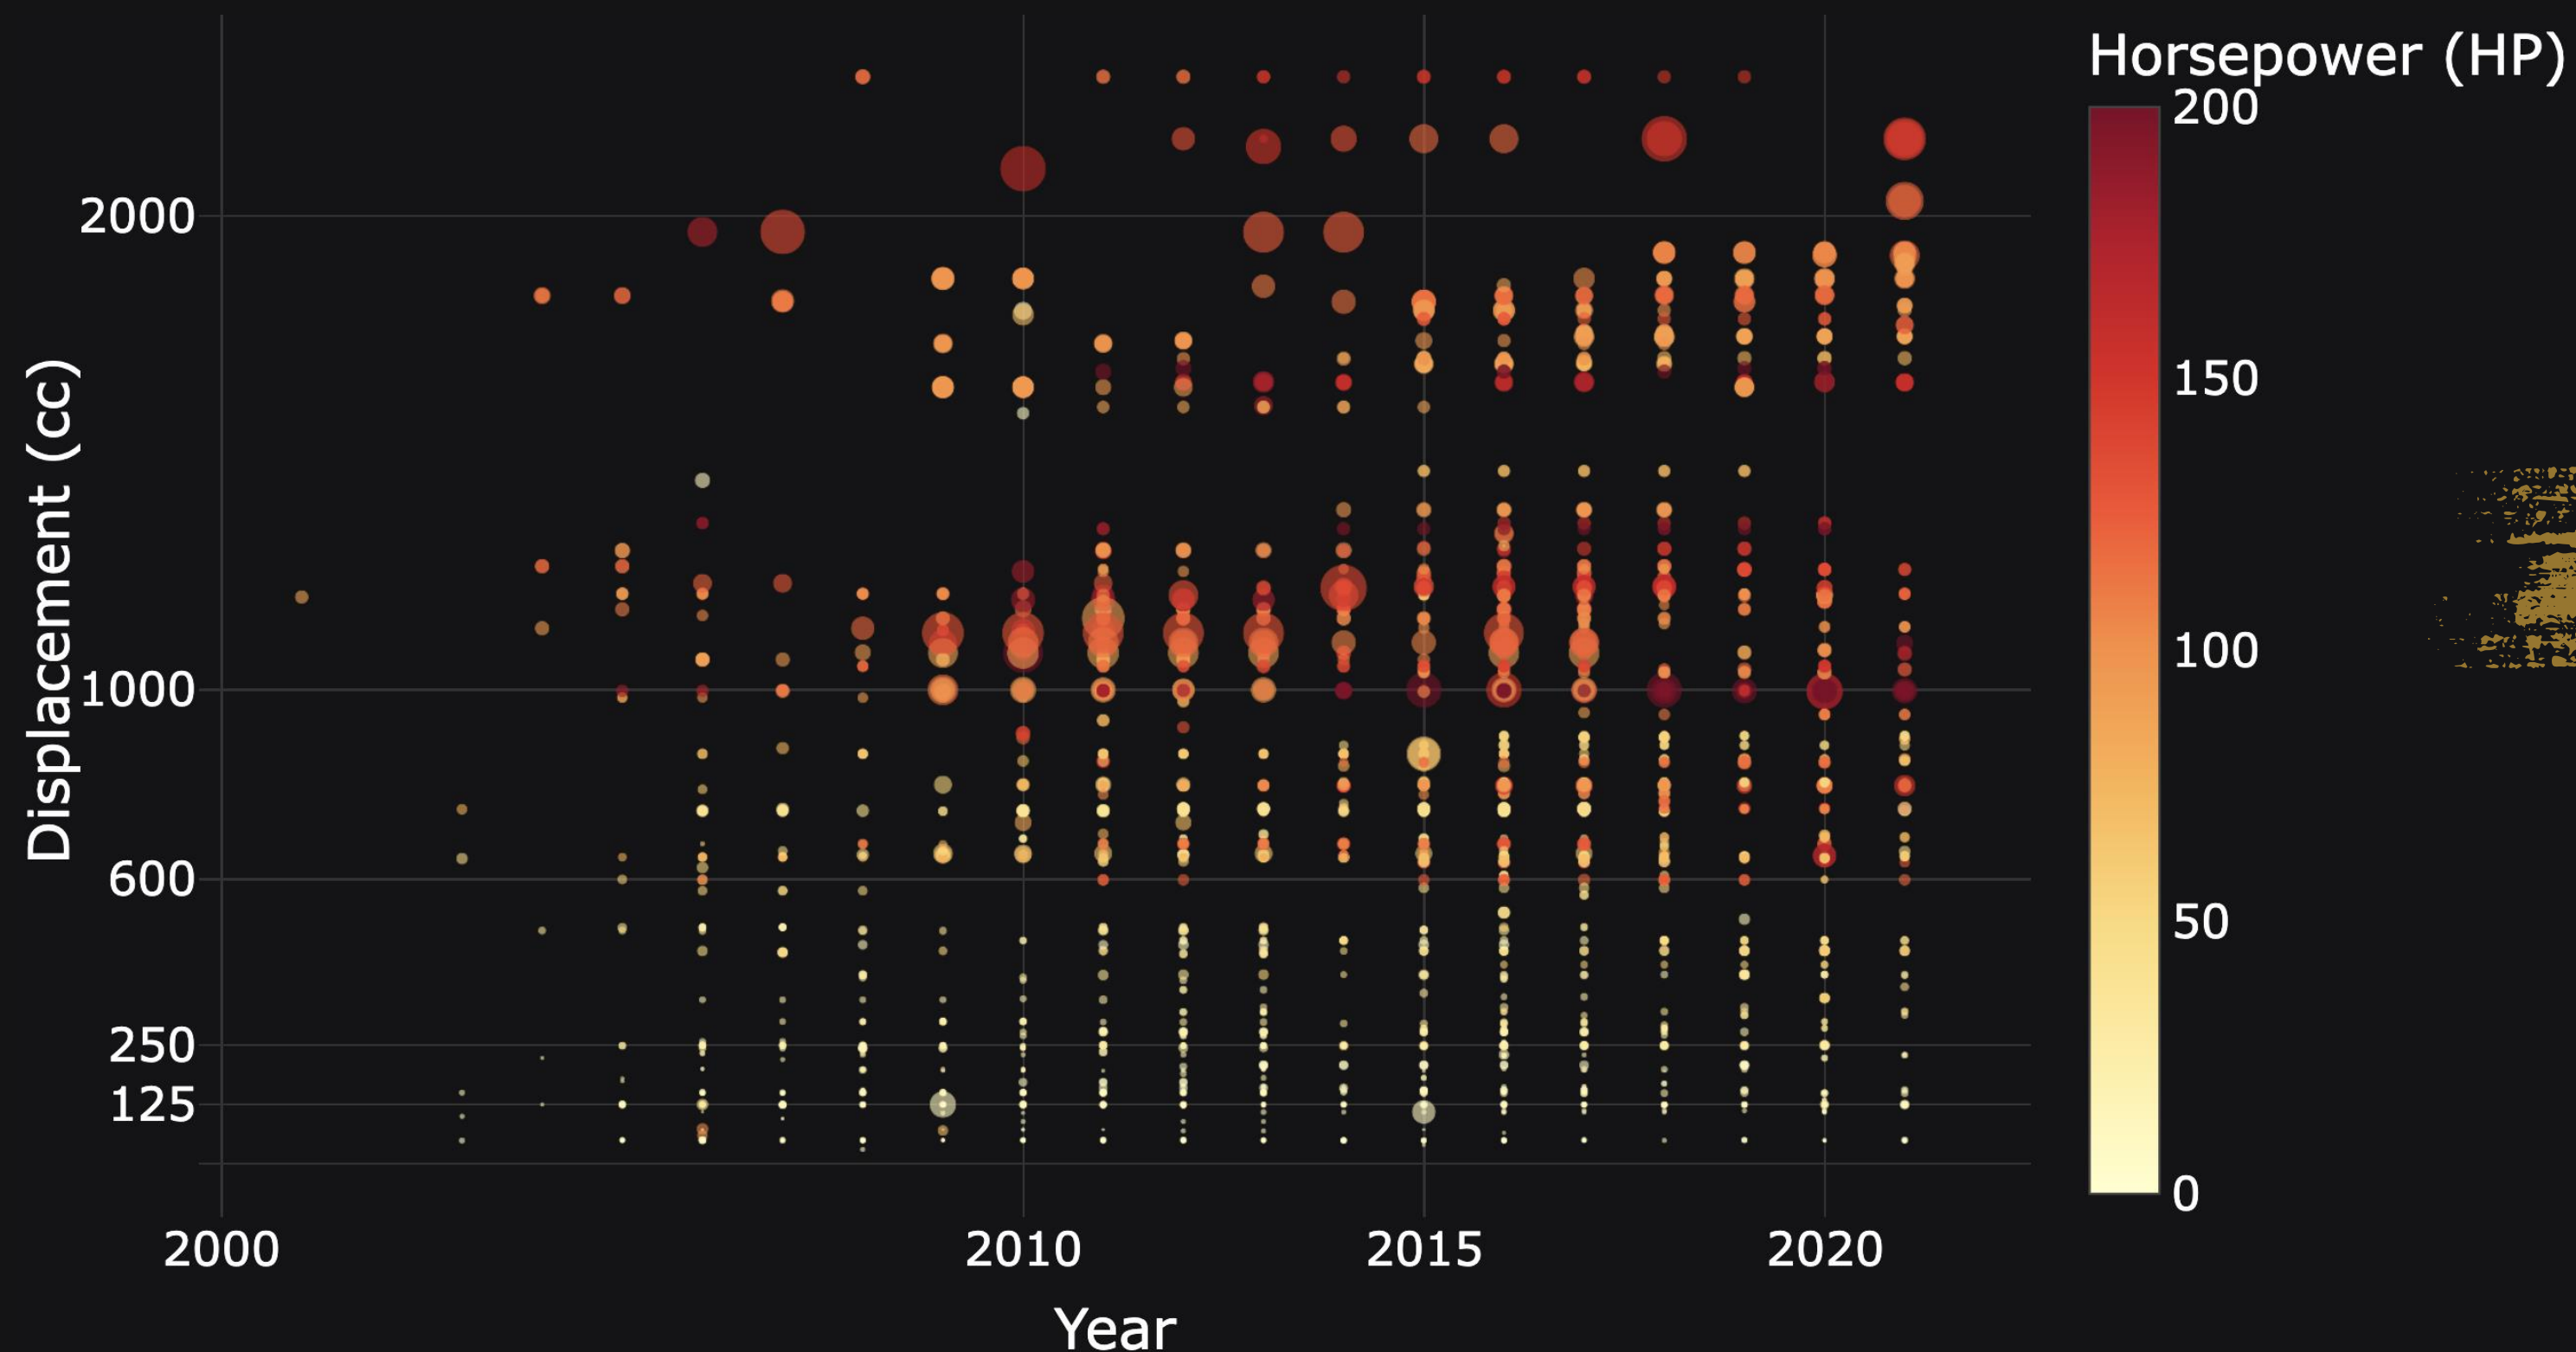

Dataset

Analysis

End

Evolution of Bike HP and CC Over the Years

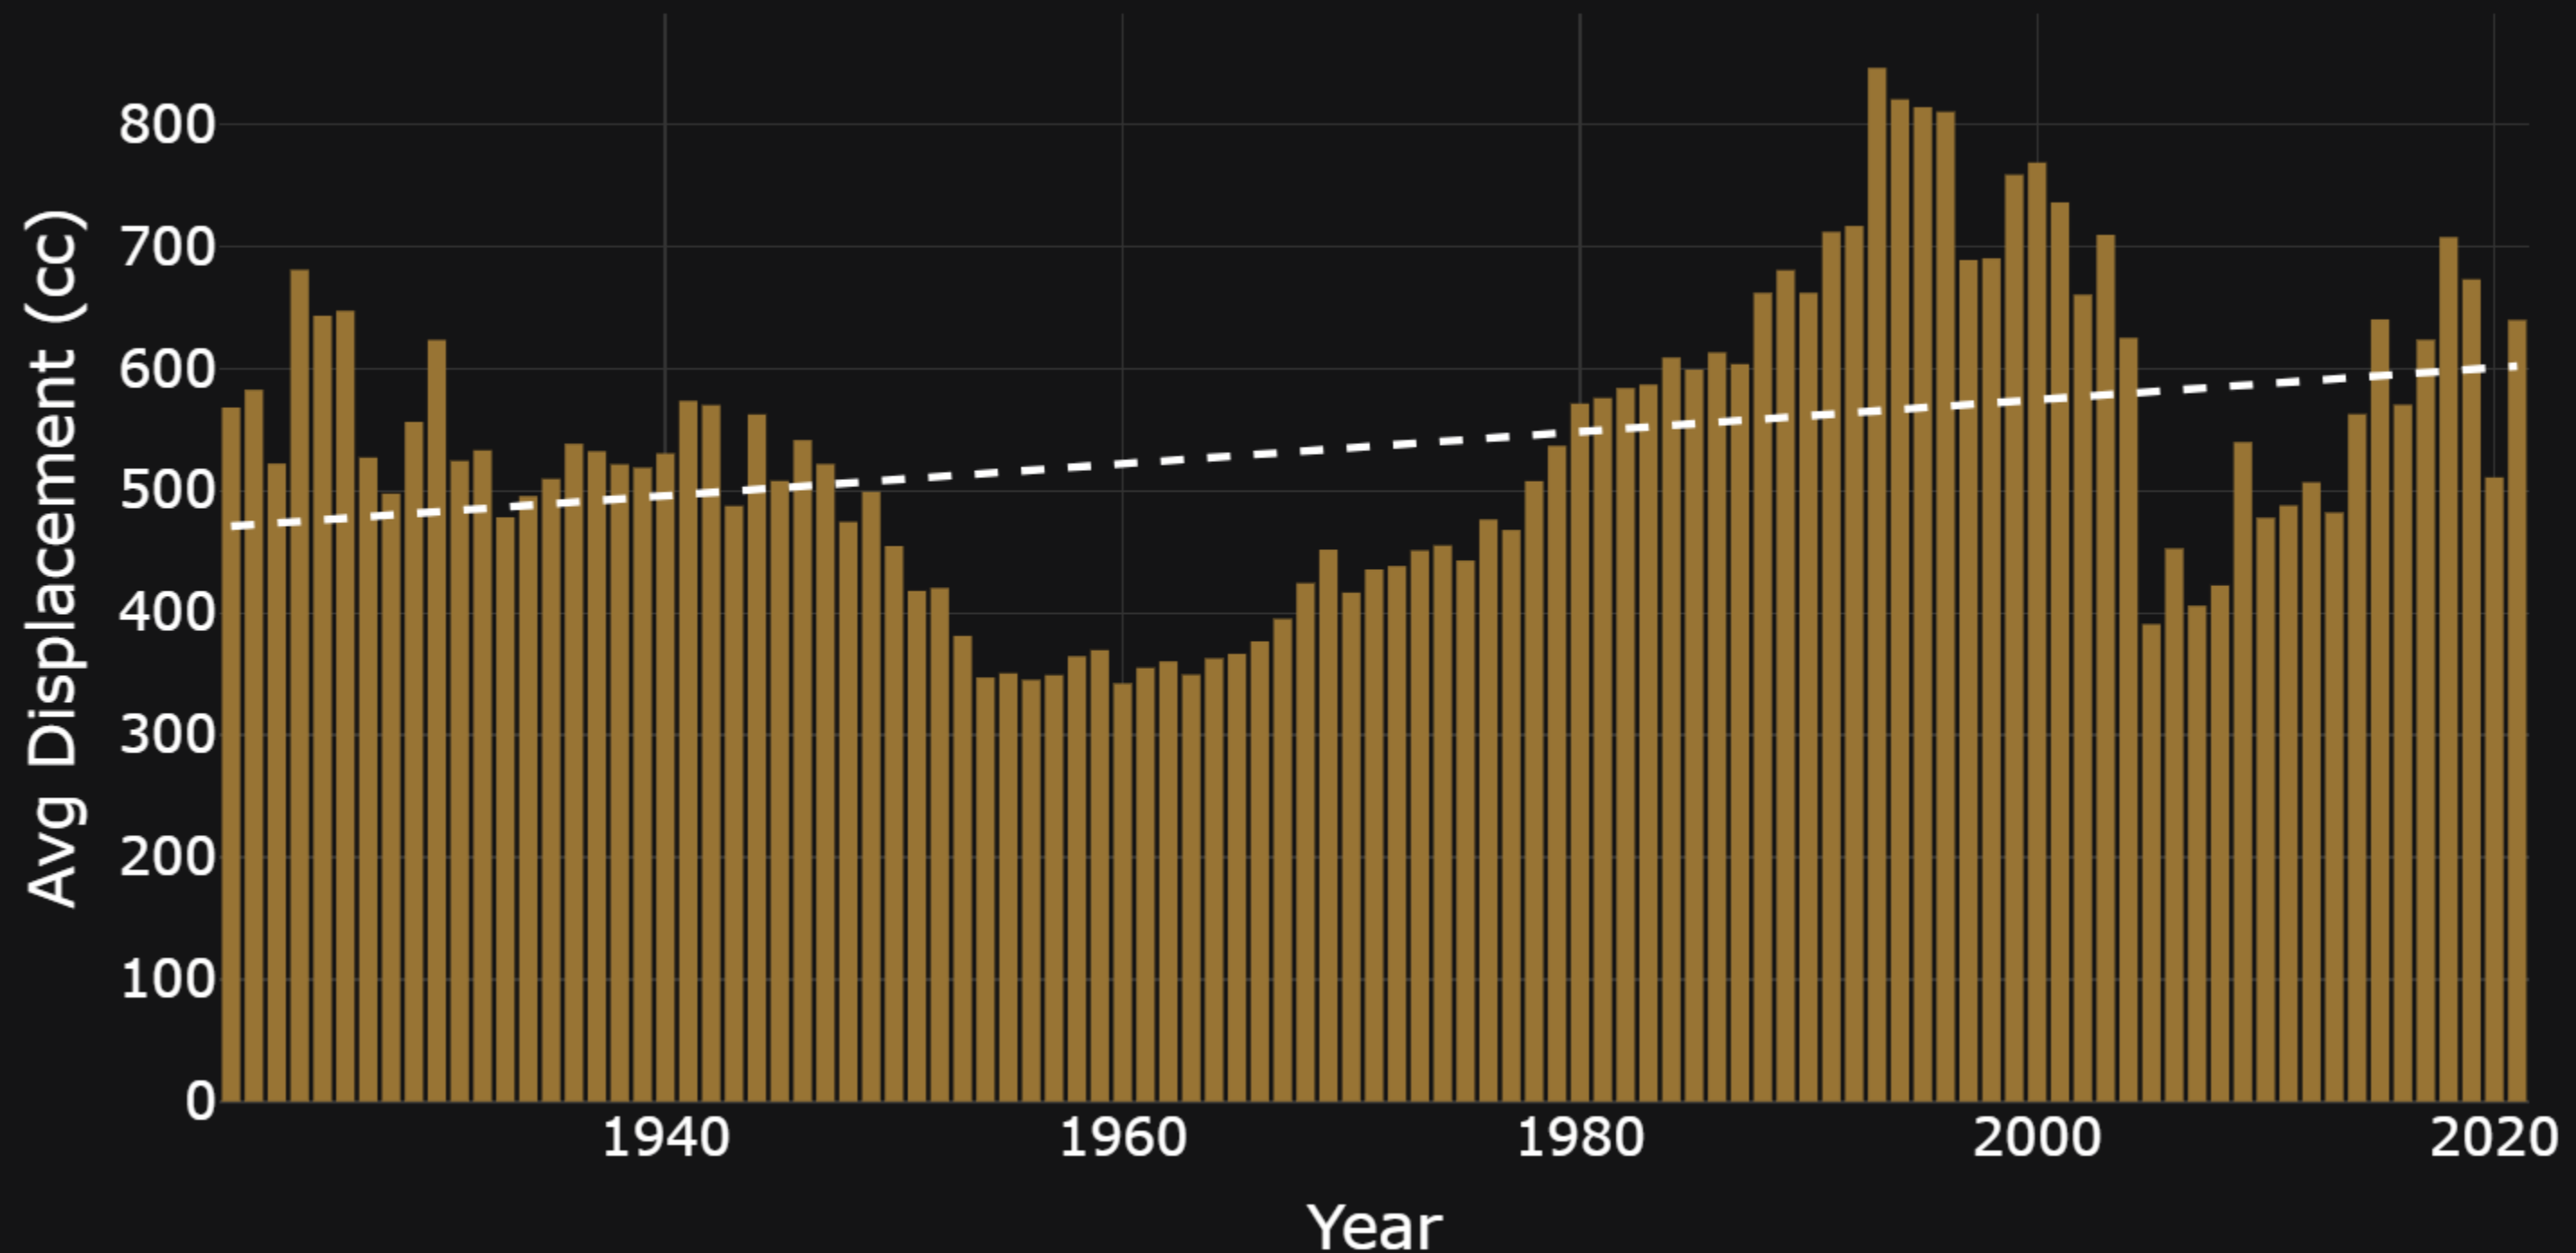

Dataset In progress End

Displacement behaves like a “trend”

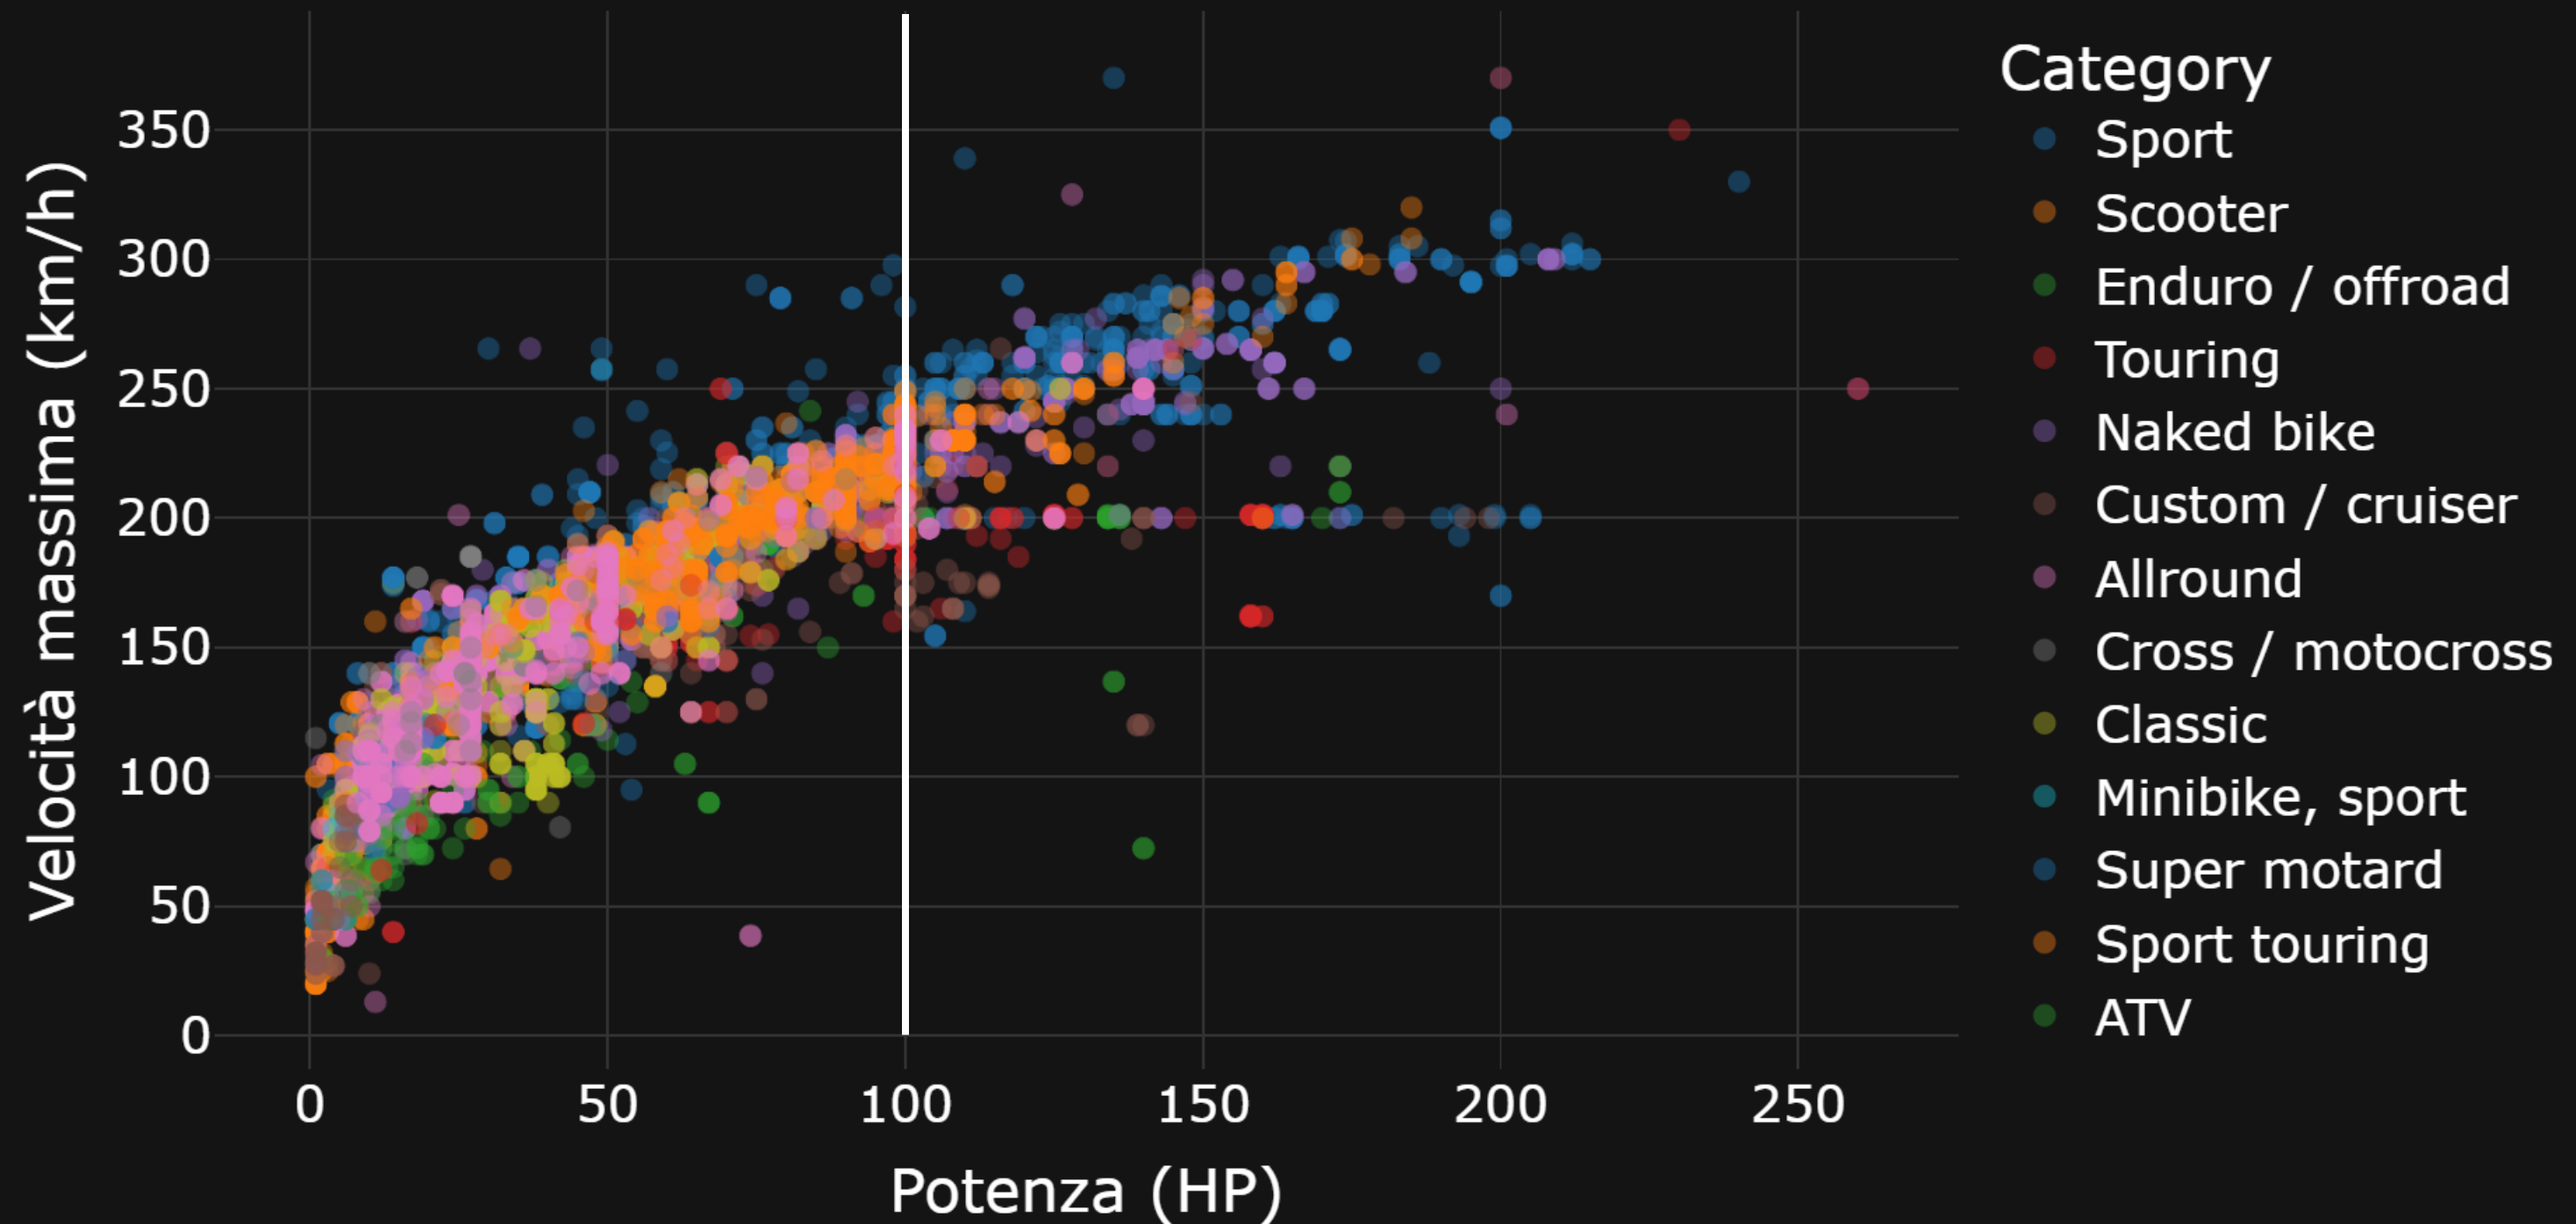

But generally, increases

Dataset HP_CC End

HP is related to the max speed

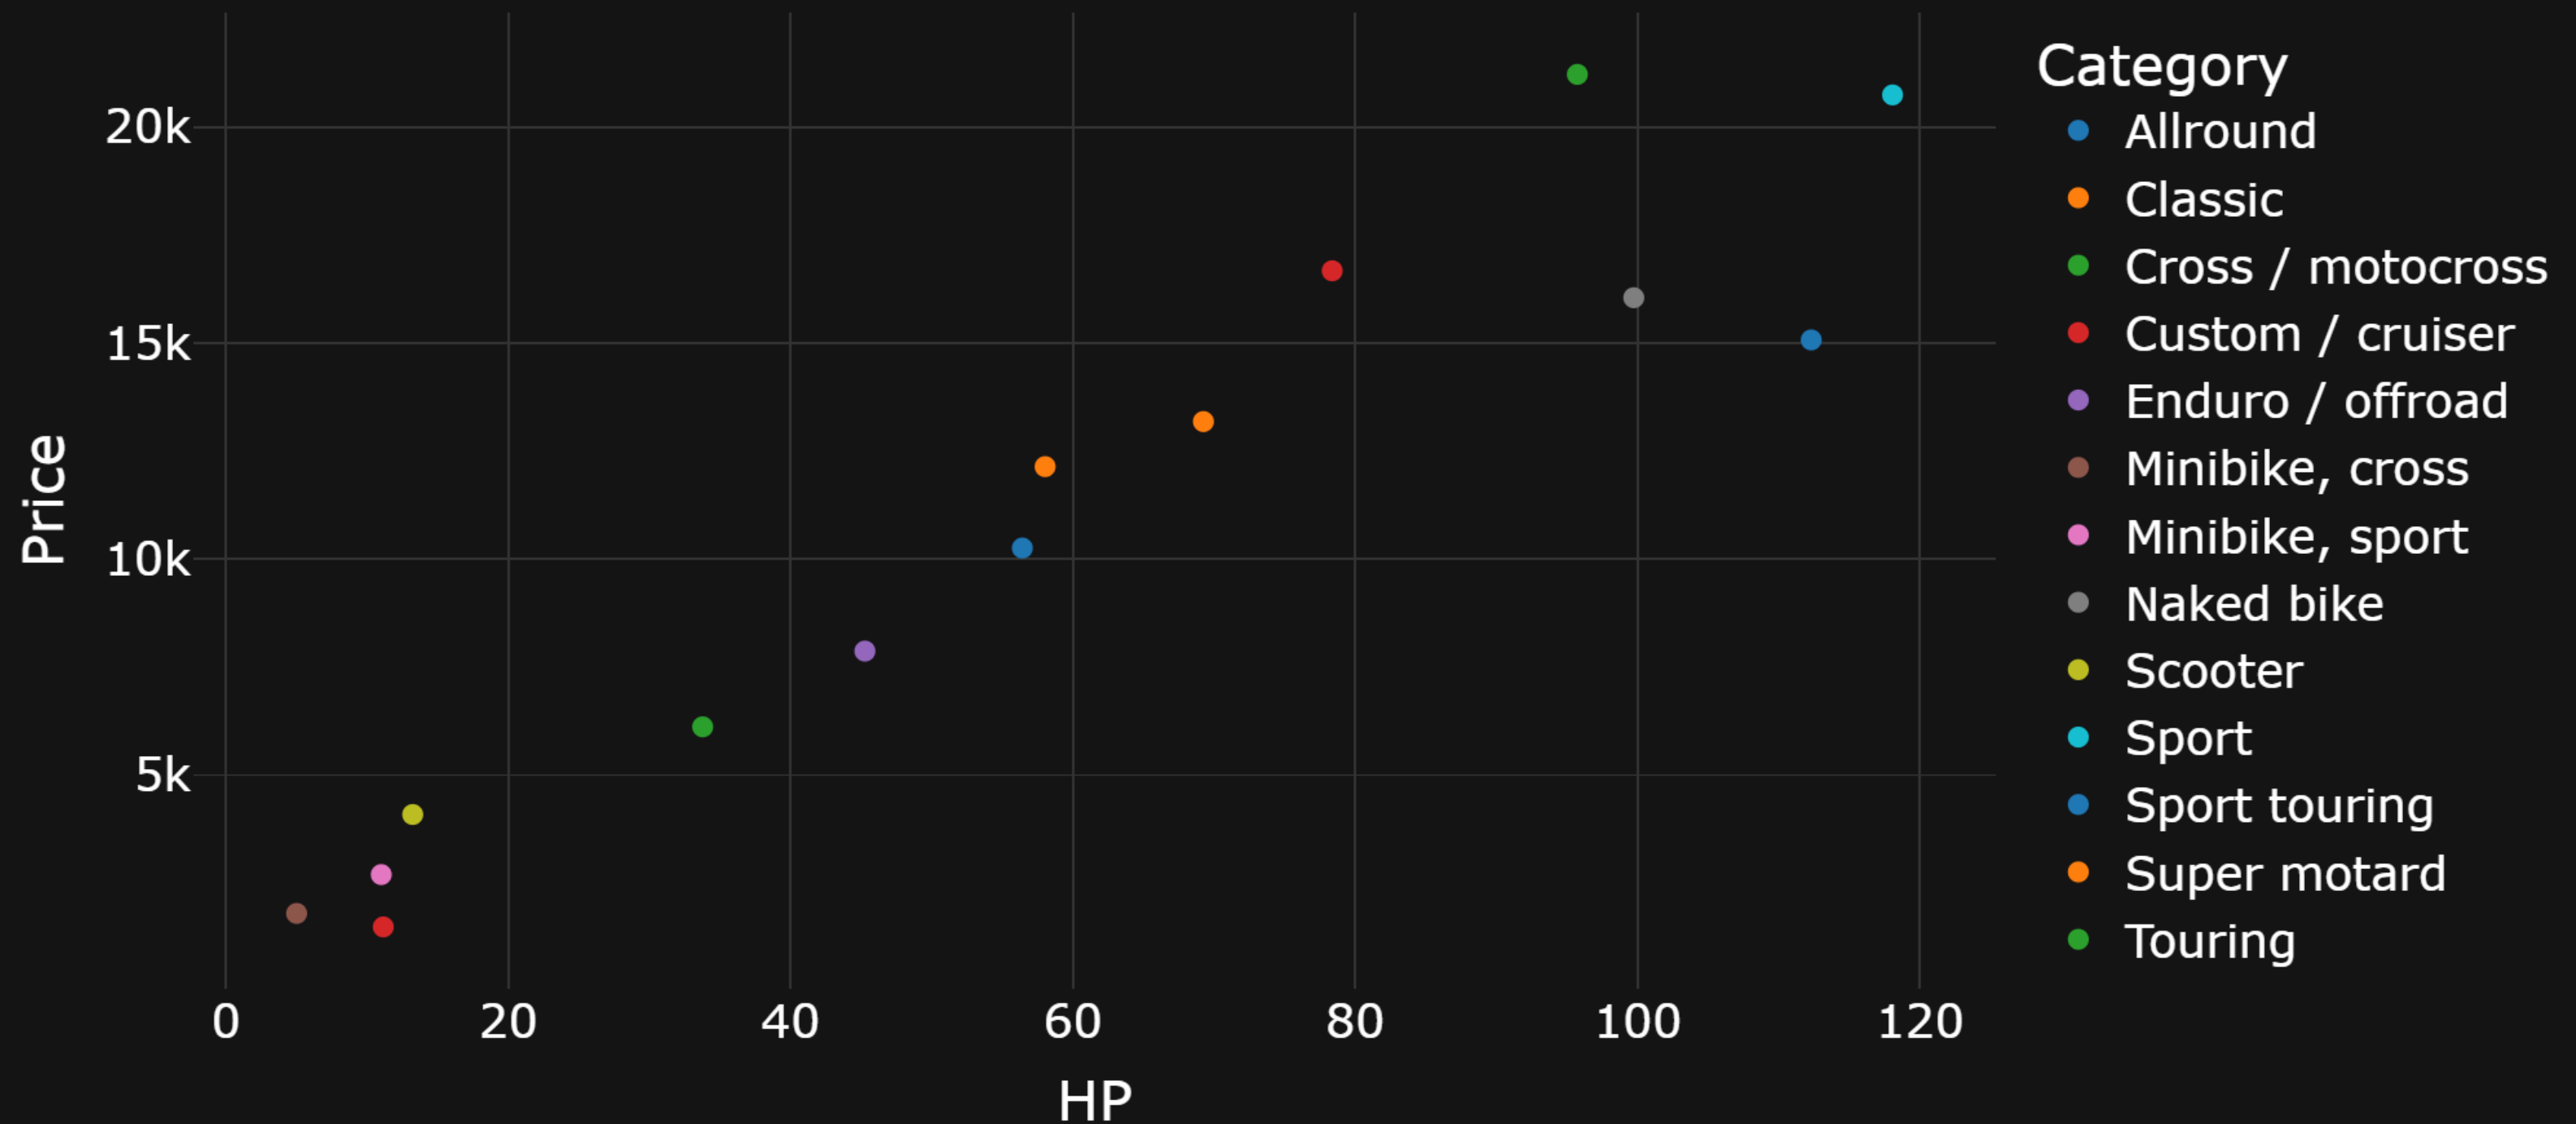

Dataset

Hp_Price

End

More HP does not mean more expensive

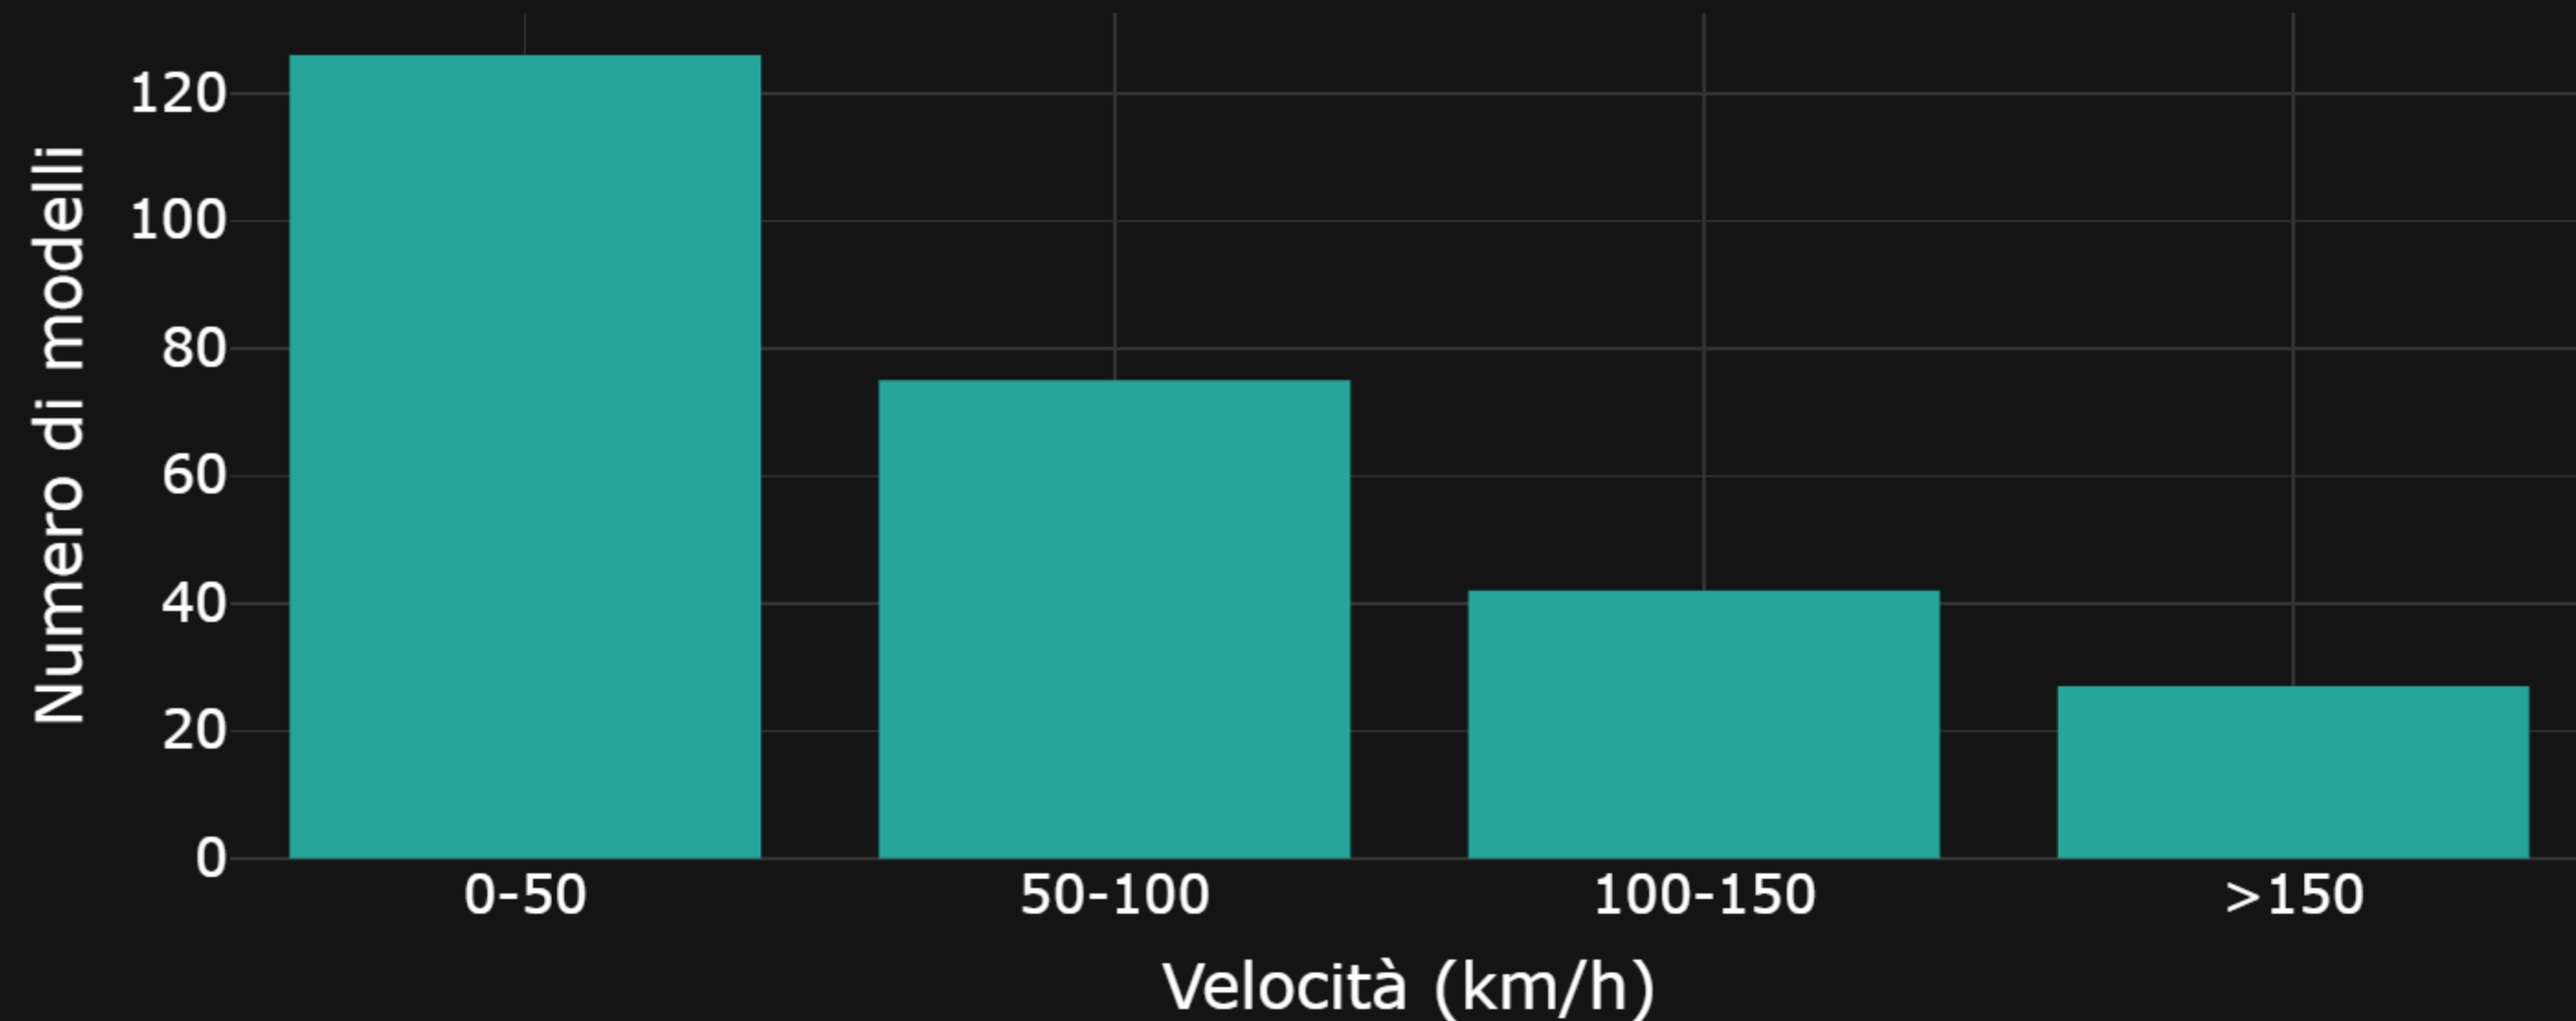

Dataset

Electrics

End

Majority of electric bikes are slow
